

SAFE FOR MASONRY, AND SAFE FOR THE ENVIRONMENT

Biological growth removed with a single application of environmentally safe D/2.

D/2 BIOLOGICAL SOLUTION

Would you ever consider using harsh chemicals to remove biological growth from the Acropolis, the Alamo, or the Tomb of the Unknown Soldier? Neither would we. For these significant historic structures, restoration professionals used D/2 Biological Solution—a nonabrasive, environmentally safe option that keeps most surfaces growth-free for a minimum of one year. A short contact time removes a wide range of biological deposits (like fungi, algae, lichens and mosses) from all surfaces. Need a safe and easy way to remove and prevent biological growth? Cathedral Stone® has the solution.

LASTS FIVE TIMES LONGER THAN BLEACH, PEROXIDE OR POWERWASHING
BIODEGRADABLE | SAFE FOR MASONRY, LANDSCAPE PLANTINGS AND GRASS

ASK US HOW D/2 SAFELY REMOVES BIOLOGICAL GROWTH.
